WATCHDOG | Drone & Real Estate Photography

Authorize MLS Photo Uploads

A quick guide for agents using BeachesMLS Matrix or Flexmls.

RWorld's Certified Photography Program permits participating photographers to upload listing media after the agent grants access. Please select the correct photographer record for Lauri Parson / WatchDog; confirm the exact directory name or ID with Lauri first.

Flexmls | Existing listing

1. Log in and open **Change Listing**, then select your listing.
2. Open the **Listing/Selling Members** tab.
3. Select Lauri's record in the **Certified Photographer** field.
4. Click **Next** twice to save your changes.

Flexmls | New listing

Under **Add Listing**, select Lauri in the **Certified Photographer** field on the General listing information screen. Complete the listing and save it through your normal listing workflow. RWorld's guide specifies clicking **Add Listing** to make it live; coordinate the timing with Lauri.

Matrix | New or existing listing

1. Open **Input (Add/Edit)**, then **Add New** or **Edit Existing**.
2. On the **Full Form**, select **Financial/Office Information**.
3. Scroll to **Photographer Information** and click **Find a Photographer**.
4. Search by name, company name, or photographer ID. Select the correct record, then **Fill**.
5. Submit the listing to save your changes.

After authorizing

Send Lauri the MLS number and property address, and let her know access has been granted. She can then check that the listing is available through her photographer account.

RWorld support: 561-585-4544

These steps follow the guide linked on RWorld's program page. That guide is older, so screen labels may vary. WatchDog's individual account activation and exact photographer record must be confirmed before the first upload.
